

The Marcato
Mandolin/Violin pickup installation instructions.

Please note; The piezo's must be handled with care during installation.

Installation;

Please note that the threaded barrels are designed to only thread on one way. If you are met with any resistance while threading them on, please flip them over and try again. Do not attempt to force them on. You should be able to easily thread them on by hand. The tool will only be needed to snug them up to the instrument.

1. Install the jack using the tool that is provided. Gently tighten the jack (similar to the way you would install a chin rest on a violin). Take care not to over tighten.
2. Install the piezo's on the body of the instrument (or the bridge depending on preference) using the provided re-usable mounting putty.

That's it! You're ready to plug it in!

We cannot accept any responsibility for instrument damage caused by installation.
